Government of British Columbia Draft Digital Principles v. 0.1
Published November 26, 2019

1. **Prioritize delivering impact for British Columbians**
   Government exists to improve peoples' lives. Digital services should support this goal. Focus on citizens' needs; build services for outcomes rather than outputs; deliver sustainable services through judicious use of public resources.

2. **Design with people**
   Deliver simple, effective products and services that improve lives, doing so via human-centered design practices with the people who will actually use the product or service.

3. **Embed inclusion**
   Apply the highest standards of accessibility, inclusion and ethics at every stage of product and service design, development and delivery.

4. **Continuously learn & improve**
   Iterate and improve products and services frequently to support learning and innovation; use modern tools and approaches; be flexible to change, accepting ongoing user feedback; test early and often; start small and scale up.

5. **Work in the open**
   Adopt open standards to facilitate interoperability and scalability; work in the open to collaborate, co-design and co-create with users; release open data and APIs; default towards open licenses, open and interoperable standards, open-source code and open, cross-sector collaboration.

6. **Take an ecosystem approach**
   Design and deliver solutions that are forward-thinking, adaptable and scalable; reuse before re-creating; support common components and interoperability.

7. **Take care of information and data**
   Manage information, including data, as a public asset in accordance with its value; apply rigour around decision-making, using data to take an evidence-based approach; act as a trusted information steward.

8. **Manage risks appropriately**
   Respect security, privacy and ethics, balancing them with the imperative for swift action; design risk mitigation strategies to be clear and to support iteration and agile delivery.

9. **Build internal capacity**
   Empower all public servants to deliver excellent digital services; support teams, providing them with technology, tools and training; encourage innovation and controlled experimentation; build an organizational culture that supports constant learning.

10. **Express cultural & historical awareness & respect**
    Acknowledge the historical relationships, inequity, trauma, and discrimination created by government; work in the spirit of reconciliation and B.C.'s Draft Principles guiding our relationship with Indigenous peoples.
